Known Issues:
• getDaysString() looks suspicious, we need to change Tu to T and Th to R
• Create an ability to check for conflicting items without generating in algorithm
• Incorrect display for Instructor on edit box widget, when selecting scheduled item from calendar (AKA: 'Choose for me' bug)
• A lab Association = (none) and 'Is Tethered = true' results in a null pointer exception thrown in a dialog
• The combination of department, course name, and catalog number it be unique
• No visual feedback on the 'Set Preferences' button in the instructor prefs window
• Names of documents in trash should be able to be used as names of documents that aren't in the trash
• You can change tabs while the "Loading" screen is up
• We want to be able to auto schedule a course that was previously scheduled and pulled off
• SmartGWT doesn't play nice with GWT
• You can corrupt the database by saving "invalid" data/schedules

Unimplemented Features:
• Add hot keys for file menu items
• Import/export CSV
• Printing
• Connection to "instructor interface" (including Send Preference Reminder Email)
• CAS login
• Settings menu - including admin privileges (Manage Administrators) and the ability to Edit Default Day and Time Constraints
• Merge Documents
• An ability to edit the name of the document at the top of the file (like Google Docs)
• The ability to publish a schedule to PeopleSoft
